

NAVSEA Approves NAVY's Use of Sponge-Jet Process as a Preferred Solution.

**Cut Costs
Increase Productivity
and Save**

With new NAVSEA PPIs, preservation teams, repair contractors and ships have three new bilge and ballast tank surface preparation procedures. These procedures allow for the use of Sponge-Jet Sponge Media™ abrasives.

12X Faster than Power Tools

NAVSEA PPIs Now Available AS PDF Files

PPI NBR: 63101-T&E
(Rev 00) Preservation
Process Instruction (PPI)
for Repair to Ballast Tanks

PPI NBR: 63101-T&E
(Rev 00) Preservation
Process Instruction (PPI)
for Repair to MIL-PRF-24441
& Ameron Bar Rust 235
Coating Systems in Bilges

PPI NBR: 63101-T&E
(Rev 00) Preservation
Process Instruction (PPI)
for Bilges

Cut Costs of Conventional Surface Preparation

- Improve productivity and efficiency

Replace Power Tools

- **12 times faster** than needle guns and other hand-tools
- **Profile up to 4+ mils** to ultimately match any coating specification
- **Achieve smooth, uniform feathering** without changing tools
- **Gain access to restricted areas,** tight corners (where coatings tend to fail first)
- **Clean and degrease** without the oil contamination commonly associated with lubricating hand-tools
- **Extend coating life** with thorough and consistently prepared surfaces

Profiling Versus Peening

Sponge Media abrasive blasting cleans and abrades while Needle Gun surface preparation peens the substrate and embeds contaminants within it.
